PRACTICAL – 11

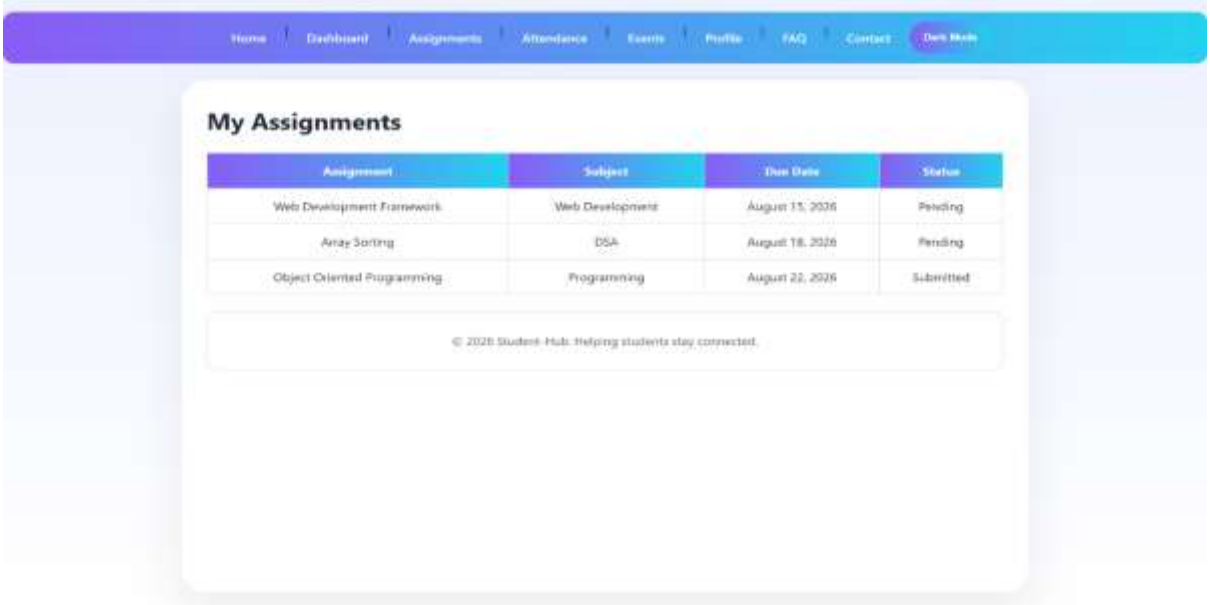

Problem Definition: Create a student management module to add, view, edit, delete, search and filter student records. All database operations must use MYSQLi statements and clear success/failure messages.

Frequently Asked Questions
How can I register as a student?
Where can I see upcoming events?
Can I search for a specific event?
Can I filter events by category?
Can I sort the event list?
Where can I view student profiles?
Can I search students?
Can the same data loader be reused?

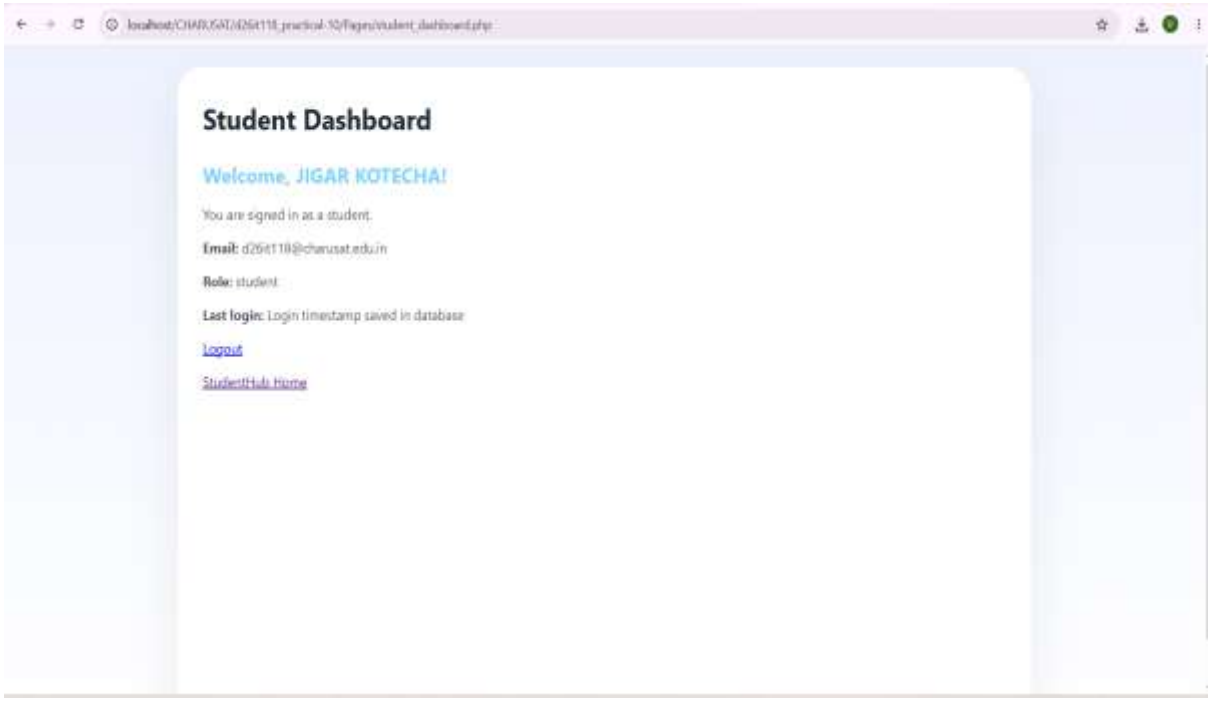

Connection :

StudentHub Database Connection Test
Database connection successful!
StudentHub MySQL database is connected using basic MySQLi.
mysqli_connect("localhost", "root", "", "studenthub");
Connection method: MySQLi
Environment: XAMPP + MySQL + phpMyAdmin

Edit Student :

Search student :

Question & Answer:

Q1. Are SELECT, INSERT, UPDATE, and DELETE operations working?

Answer: Yes, SELECT is used to display student records, INSERT adds new students, UPDATE modifies existing student details, and DELETE removes student records from the database.

Q2. Is search by name/email/course implemented?

Answer: Yes, the search functionality allows users to find student records by name, email, or course, making it easier to locate specific students.

Q3. Are delete operations confirmed before execution?

Answer: Yes, a confirmation message appears before deleting a student record. This helps prevent accidental deletion and ensures that the user confirms the action before it is executed.

Conclusion / Learning Outcome:

In this practical, we developed a Student Management CRUD module using PHP, MySQL, and XAMPP. The system allows users to add, view, edit, and delete student records efficiently. Search functionality helps users find students by name, email, or course. MySQLi statements are used to perform database operations securely. Confirmation messages help prevent accidental deletion of student records. Success and failure messages improve user interaction and make the system easier to use. Overall, this practical helped us understand database management, CRUD operations, search functionality, and the development of secure data-driven applications.
