Connection :

StudentHub Database Connection Test
Database connection successful!
StudentHub MySQL database is connected using basic MySQLi.
mysqli_connect("localhost", "root", "", "studenthub");
Connection method: MySQLi
Environment: XAMPP + MySQL + phpMyAdmin

Delete Event :

Question & Answer:

1. Are add, update, and delete functionalities implemented correctly?
Yes, the add, update, and delete functionalities are used to manage records in the database. Users can add new records, modify existing records, and delete unwanted records. These operations help maintain accurate and updated information in the system.

2. Is the UI linked with the database correctly?
Yes, the user interface is connected to the MySQL database using PHP and MySQLi. The interface allows users to perform database operations through forms and buttons. The data is stored, retrieved, and updated through PHP code.

3. Are poster uploads validated for type and size?
Poster uploads should be validated for file type and size before being saved. Only allowed image formats, such as JPG, JPEG, and PNG, should be accepted. File size limits help prevent oversized uploads and improve application security.

4. Are success and failure messages displayed?
Yes, success and failure messages inform users about the results of their actions. Success messages confirm that an operation has been completed, while failure messages explain when an operation cannot be completed. These messages improve usability and help users identify errors.

Conclusion / Learning Outcome:

In this practical, I learned how to implement event management CRUD operations using PHP and MySQL. I understood how to add, view, update, and delete event records through a user-friendly admin interface. I also learned to upload event posters with file type and size validation for better security. Success and failure messages help users understand the results of their actions. Overall, this practical improved my understanding of database connectivity, server-side validation, event status management, and secure web application development.
